Appendix 1

BAE Systems
"BAE Systems recognises the importance of collaboration between the public and private sectors in promoting cyber awareness using threat intelligence, boosting Singapore's ecosystem to uplift homegrown cyber skills, and in opening up cross-industry collaboration with local companies. This partnership between CSA and BAE Systems builds on our relationships with some of Singapore's largest organisations, including financial institutions, government agencies and the critical information infrastructure sector, and reinforces our commitment to partnering and investing locally to keep Singapore at the forefront in understanding and defending against cyber threats," said Boye Vanell, Regional Director – Asia, BAE Systems.

(ISC)²
"We are very pleased to establish this close partnership to develop the cybersecurity professional workforce in Singapore. This collaboration will complement ongoing capacity-building efforts in the Government, industry and academia, to better equip professionals that enable a safe and secure cyber world," said David Shearer, CEO, (ISC)².

Microsoft
"No single organisation can solve the world's security challenges alone. This is why Microsoft has worked hard to form alliances with both public and private organisations. We are very confident that, through our collaboration with the Cyber Security Agency of Singapore, public and private organisations as well as citizens in Singapore can operate in an environment of trust. In addition to sharing cyber threat intelligence and collaborating on innovative cybersecurity services, we hope to nurture a safer and trusted cyber space through building local capabilities in cybersecurity as well as supporting public cyber awareness and education programmes," said Jessica Tan, Managing Director, Microsoft Singapore.

Palo Alto Networks
"To protect our digital way of life where we are facing increasingly sophisticated attacks, we believe organizations must adopt a breach prevention-oriented security approach. Palo Alto Networks is proud to collaborate with the Cyber Security Agency of Singapore (CSA) to share knowledge and insights on the ever-evolving cyber threat landscape and how to respond with a prevention-oriented architecture, strengthen the cybersecurity ecosystem, and support the CSA's role in Singapore's drive to become a Smart Nation", said Mr Wahab Yusoff, ASEAN Vice President and General Manager, Palo Alto Networks.
